

User guide: Create a qualified signature - MacOs

Did you know ? A qualified signature has the same legal value than a wet one and can thus be accepted on documents. Before creating one make sure that you have with you : your eID card, your 4-digits pin code and a card ID reader.

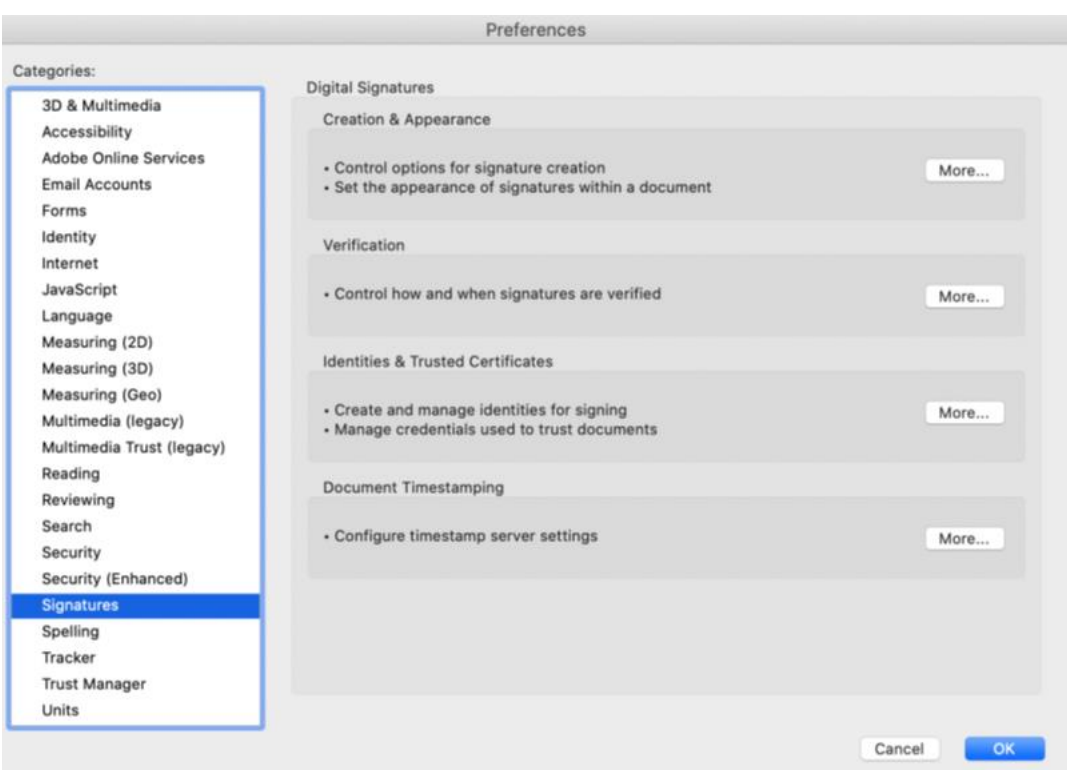

If you have any questions or difficulties please contact our customer service at <https://www.ing.be/en/retail/contact>

1

- Connect your eID card reader to your computer
- Insert your eID card into the card reader
- Open Adobe Acrobat Reader
- In the bar at the top, select "Acrobat Reader" and select the option "Preferences"

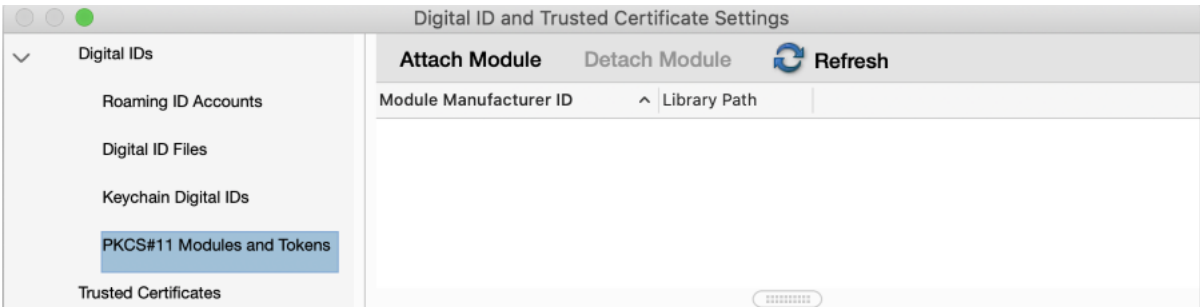

2

- Select "Signatures" in the menu on the left
- Select "More" in the section "Identities & Trusted Certificates"

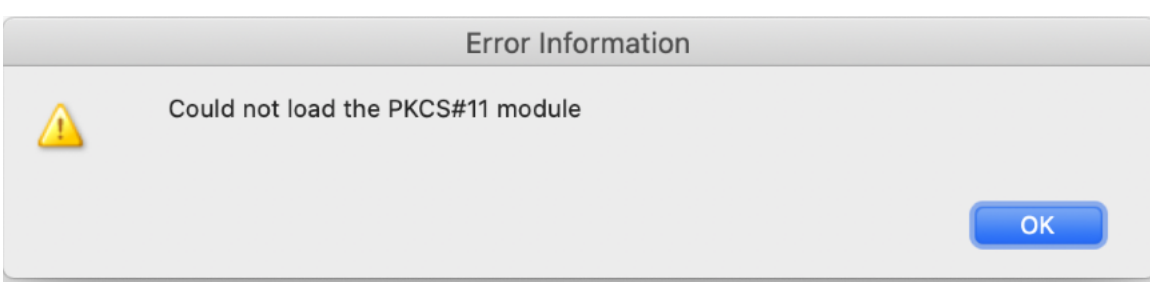

3

- Select the last option in "Digital IDs" called "PKCS#11 Modules and Tokens"
- Select "Attach Module"

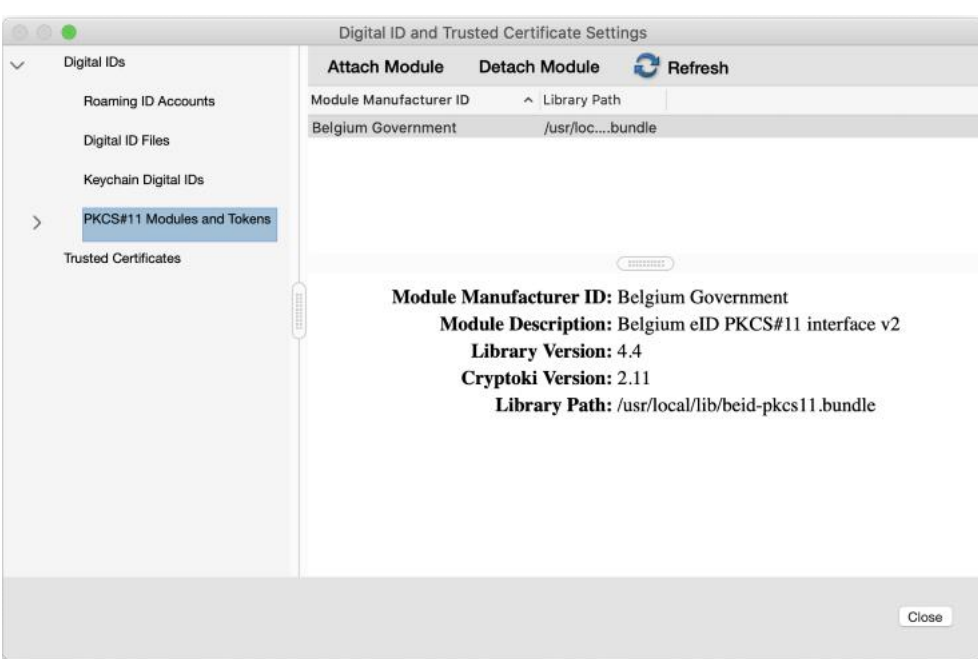

4

Enter '/usr/local/lib/beid-pkcs11.bundle' (without the quotes) and click 'OK'.
If you get an error message saying the module can be loaded, please install the eID software listed on <https://eid.belgium.be/en>

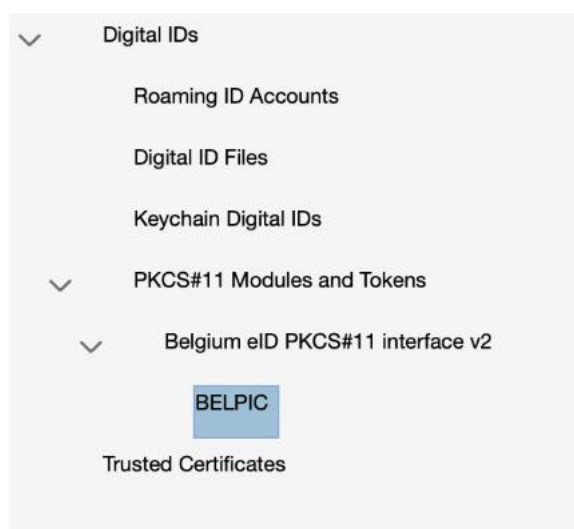

5

In the section "PKCS#11 Modules and Tokens" you have now "Belgium eID PKCS#11 interface v2"

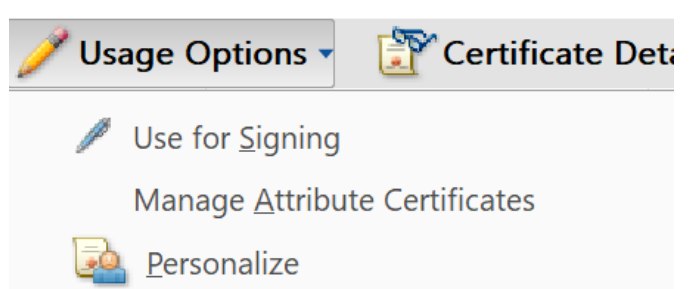

6

- Insert you eID card into your card reader
- BELPIC now appears underneath "Belgium eID PKCS#11 interface v2"

7

- Select the certificate with your First Name + Last Name (Signature)
- Select the pencil "Usage Options" and select "Use for Signing"

8

You can now electronically sign your documents !
